Definition of the indicators

Crude birth set — Annual number of births per 1,000 population.

Total artifly rate — Number of children enrolled in primary school age, expressed as a percentage of the total particles of the part of the standard production of primary school age. Expressed as a percentage of the total particles of the total particles of the partic

S definition
Baseline used to compare the performance of each country OR if country data is equal to the regional baseline
Country data is better than the regional baseline
Country data is worse than the regional baseline

http://www.unicef.org/publications/files/UNICEF\_SOWC\_2016.pdf Human Development Report 2016 – United Nations Development Programme

- usual not available, x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed. Data refer to the most recent year available during the period specified in the column heading.
- \*\* Excludes China.

  Y Detail differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages.

  Surveys with a superscript footnote of "a" are mainly DHS surveys awaiting re-analysis to add the households that did not have salt to the estimate. Surveys with a superscript footnote of "b" Surveys with a superscript footnote of "a" are mainly DHS surveys awaiting re-analysis to add the households that did not have sait to the estimate. Surveys with a superscript footnote of "b" cannot be confirmed in whether the reported value includes households without sait or not.

  J Estimates for Eastern Europe and Central Asia are based on a model fit for all of Europe and Central Asia. The Russian Federation was not included and data were mainly from countries in Eastern Europe and Central Asia.

  Passed on small denominators (typically 25–49 unweighted cases). No data based on fewer than 25 unweighted cases are displayed.

  S Re-analyzed by adjusting the denominator to include households without sait.

| Definition of the indicators
| Crude birth rate – Annual number of births per 1,000 population.
| Births by age 18 – Percentage of women aged 20-24 who gave birth before age 18. This standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age of 18. Note that the data are based on the answers of women aged 20-24 whose risk of giving birth before the age of 18 is behind them.
| Total fertility rate – Number of children who would be born per woman if she lived to the end of her childbearing years and bore children at each age in accordance with prevailing age-specific fertility rates.
| Adolescent birth rate – Number of births per 1,000 adolescent girts aged 15-19. Birth registration – Percentage of children under age 5 who were registered at the moment of the survey. The numerator of this indicator includes children reported to have a birth certificate, regardless of whether or not it was seen by the

Birth registration — Percentage of children under age 5 who were registered at the moment of the survey. The numerator of this indicator includes children reported to have a birth certificate, regardless of whether or not it was seen by the interviewer, and those without a birth certificate whose mother or caregiver says the birth has been registered.

Population below international poverty line of US\$1.90 per day — Poverty headcount ratio at \$1.90 a day is the percentage of the population living on less than \$1.90 a day at 2011 international prices. As a result of revisions in PPP exchange rates, poverty rates for individual countries cannot be compared with poverty rates reported in earlier editions.

Life expectancy at birth — Number of years newborn children would live if subject to the mortality risks prevaling for the cross section of population at the time of their birth.

Infant mortality rate — Probability of dying between birth and exactly 1 year of age, expressed per 1,000 live births.

Under-5 mortality ratio — Number of deaths of women from pregnancy-related causes per 10,000 live births.

Maternal mortality ratio — Number of deaths of women from pregnancy-related causes per 10,000 live births sum time period. The 'reported' column shows country-reported figures that are not adjusted for under-reporting and miscassification. For the "adjusted" column, see note below (f) Maternal mortality ratio under shows the same time period. The 'reported' column shows country-reported figures that are not adjusted to long, no rounding: 100–999, rounded to nearest 10, and >1,000, rounded to nearest 11, and >1,000, rounded to nearest 10, and >1,000, rounded to nearest 1

to nearest 100. Adjusted: <1000, rounded to nearest 11. and ≥1,000, rounded to nearest 11. Lifetime risk of maternal death Lifetime risk risk of maternal deat

Primary school net enrolment ratio — Number of children enrolled in primary or secondary school who are of official primary school age, expressed as a percentage of the total number of children of official primary school age. Because of the inclusion of primary-school-aged children enrolled in secondary school, this indicator can also be referred to as a primary adjusted net enrolment ratio.

Lower secondary school net enrolment ratio — Number of children enrolled in lower secondary school who are of official lower secondary school age, expressed as a percentage of the total number of children of official lower secondary school age. Lower secondary net enrolment ratio does not include lower-secondary-school-aged children enrolled in tertiary education owing to challenges in age reporting and recording at that level.

Youth literacy rate — Number of literate persons aged 15-24 years, expressed as a percentage of the total population in that group.

Total adult literacy rate — Percentage of population aged 15 years and over who can both read and write with understanding a short simple statement on his/her everyday life.

evenday life.

Child labour – Percentage of children 5–17 years old involved in child labour at the moment of the survey. A child is considered to be involved in child labour under the following conditions: (a) children 5–11 years old who, during the reference week, did at least one hour of economic activity or at least 28 hours of household chores, (b) children 12–14 years old who, during the reference week, did at least 14 hours of economic activity or at least 28 hours of household chores, (c) children 15–17 years old who, during the reference week, did at least 43 hours of conomic activity or at least 28 hours of household chores, (c) children 15–17 years old who, during the reference week, did at least 43 hours of economic activity or nousehold chores, and (c) children aged 5–17 years old in hazardous working

gonditions.

Child marriage – Percentage of women 20–24 years old who were first married or in union before they were 15 years old and percentage of women 20–24 years old who were first married or in union before they were 16 years old.

Female genital mutiliation/cutting (FGMIC) – (a) Women: percentage of women 15–49 years old who have undergone FGMIC; (b) girls: percentage of girls 0–14 years old who have undergone FGMIC (as reported by their mothers); (c) support for the practice: percentage of women 15–49 years old who have heard about FGMIC as reported by their mothers); (c) support for the practice: percentage of women 15–49 years old who have heard about FGMIC and think the practice should continue.

Justification of wife-beating - Percentage of women and men 15-49 years old who consider a husband to be justified in hitting or beating his wife for at least one of the specified reasons, i.e., if his wife burns the food, argues with him, goes out without telling him, neglects the children or refuses sexual relations.

Data not available,
 Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages.
 Estimates from data years prior to 2000 are not displayed.

 Data refer to the most recent year available during the period specified in the column heading.

\* Data refer to the most recent year available during the period specified in the column heading.

\* Data differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages. Surveys with a superscript footnote of "a" are mainly DHS surveys availing re-analysis to add the households that did not have salt to the estimate. Surveys with a superscript footnote of "b" cannot be confirmed in whether the reported value includes households without salt or not. J Estimates for Eastern Europe and Central Asia are based on a model fit for all of Europe and Central Asia. The Russian Federation was not included and data were mainly from countries in Eastern Europe and Central Asia.

p Based on small denominators (typically 25–49 unweighted cases). No data based on fewer than 25 unweighted cases are displayed.

\$ Re-analyzed by adjusting the denominator to include households without salt.

‡ Excludes India.

# tion of the indicators

Crude birth rate – Annual number of births per 1,000 population.

Eruse birth rate – Annual number of births per 1,000 population.

Births by age 18. Percentage of women aged 20–24 who gave birth before age 18. This standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age of 18. Note that the data are based on the answers of women aged 20–24, whose risk of giving birth before the age of 18 is behind them.

Total fertility rate – Number of children who would be born per woman if she lived to the end of her childbearing years and bore children at each age in accordance with prevailing age-specific fertility rates.

Adolescent birth rate – Number of births per 1,000 adolescent girls aged 15–19.

HIV incidence per 1,000 uninfected population - Estimated number of new HIV infections per 1,000 uninfected population, 2016. Data reported for children (aged <5),

INV inconces per 1,000 unimetered population — Estimated number of new his inflections per 1,000 unimetered population, 2016. Data reported for children adelescents (aged 15–19) and all ages.

Primary school net enrolment ratio — Number of children enrolled in primary or secondary school who are of official primary school age, expressed as a percentage of the total number of children of official primary school age. Because of the inclusion of primary-school-aged children enrolled in secondary school, this indicator can also be referred to as a primary adjusted net enrolment ratio.

Total tertility rate – Number of children who would be born per woman if she lived to the end of her children at each age in accordance with prevailing age-specific fertility rates.

Adoloscent birth rate – Number of children of ficing per 1,000 adolescent girls aged 15-19.

Birth registration – Percentage of children of metage 5 who were registred at the moment of the survey. The numerator of this indicator includes children reported to have a birth certificate, regardless of whether or not a proposed or caregiver says the birth has been registered.

Population begin in PFP exchange rates, poverly rates for individual countries cannot be compared with power values of proving the countries cannot be compared with power values of proving the countries cannot be compared with power values reported in senter editions.

Infant mortality rate – Probability of dripp between birth and exactly 5 years of age, expressed or 1,000 live births.

Material mortality rate – Probability of dripp between birth and exactly 5 years of age, expressed or 1,000 live births.

Material mortality rate – Probability of dripp between birth and exactly 5 years of age, expressed or 1,000 live births.

Material mortality rate – Probability of dripp between birth and exactly 5 years of age, expressed or 1,000 live births.

Material mortality rate – Probability of dripp between birth and exactly 5 years of age, expressed per 1,000 live births.

Material mortality rate – Probability of dripp between from pregnancy-related causes per 10,000 live births during the same time period. The reported column shows country-reported figures that are not adjusted for to innerest time, and a proposition of the following scheme: Reported: ~100, no rounding; 100-999, rounded to nearest 10.

In the productive year of the column of the secondary school age, expressed as a percentage of the total number of children of C

Baseline used to compare the performance of each country OR if country data is equal to the regional baseline Country data is better than the regional baseline

# Acronyms and symbols

- Data not available,

  X Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.

  \*Data refer to the most recent year available during the period specified in the column heading.

  \*Evaluate China\*
- Data differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages. Surveys with a superscript footnote of "a" are mainly DHS surveys awaiting re-analysis to add the households that did not have salt to the estimate. Surveys with a superscript footnote of "b" cannot be confirmed in whether the reported value
- includes households without salt or not. includes households without salt or not.

  J Estimates for Eastern Europe and Central Asia are based on a model fit for all of Europe and Central Asia. The Russian Federation was not included and data were mainly from countries in Eastern Europe and Central Asia.

  p Based on small denominators (typically 25–49 unweighted cases). No data based on fewer than 25 unweighted cases are displayed.

  S Re\_analyze'h to adjustion the denominator in include households without salt

Definition of the indicators

Trude birth rate — Annual number of births per 1,000 population.

Births by age 18 — Percentage of women aged 20-24, who gave birth before age 18. This standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age of 18. Note that the data as based on the answers of women aged 20-24, who gave birth before age age of 15 is behind them.

Adolescent birth rate — Number of children enrolled in primary or secondary school age, expressed as a percentage of the botal number of children or 10 fall fertility rate.

Adolescent birth rate — Number of children enrolled in primary or secondary school age, expressed as a percentage of the botal number of children enrolled in primary school age, Examel or the fall ages.

Population below international powerty line of US\$1.90 per day — Powerty headcount ratio a \$1.90 a day is the percentage of the botal number of birth per 1,000 uninfected population - Estimated number of exhibition (page 45), adolescents (aged 15-19) and a large.

Population below international powerty line of US\$1.90 per day — Powerty headcount ratio a \$1.90 a day is the percentage of the botal number of hinds below recordary school age, Lower secondary reterrolled in primary school age, Lower secondary school age

Colors definition

Baseline used to compare the performance of each country OR if country data is equal to the regional baseline
Country data is better than the regional baseline
Country data is worse than the regional baseline

Crude birth rate - Annual number of births per 1 000 population

HIV incidence per 1,000 uninfected population - Estimated number of new HIV infections per 1,000 uninfected population, 2016. Data reported for children (aged <5), adolescents

Ordination of the indicators

First by ago 18 – Proceeding of women agod 20–24 who gave the growth before ago 18. This standardized indicator from population-based surveys captures levels of fertility among adolescents up to the ago of 18. Note that the data are based of 18. Note that the data are based of 18. Who the high of growth before the ago of 18. This standardized indicator from population-based surveys captures levels of fertility among adolescents up to the ago of 18. Note that the data are based of 18. Note that the d

Baseline used to compare the performance of each country OR if country data is equal to the regional baseline Country data is better than the regional baseline

Country data is worse than the regional baseline

Crude birth rate - Annual number of births per 1 000 population

Births by age 18 – Percentage of women aged 20–24 who gave birth before age 18. This standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age of 18. Note that the 15–19) and all age data are based on the answers of women aged 20–24, whose risk of giving birth before the age of 18 is behind them.

Definition of the indicators

HIV incidence per 1,000 uninfected population - Estimated number of new HIV infections per 1,000 uninfected population, 2016. Data reported for children (aged <5), adolescents (aged

Birth by age 18 — Percentage of women aged 20-24 who gave birth before age 18. The standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age of 18. Note that the standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age of 18. Note that the standardized indicator from population between the standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age of 18. Note that the fertility among adolescent gifs aged 15-9.

Birth registration – Percentage of the both numeral of orbits per 1,000 accordance with prevailing age-specific fertility rates.

Adolescent britted whose mother or caregiver says the both as birth certificate, regardless of whether or not two standardized whose mother or caregiver says the birth has been registered.

Population below international poverty time for individual countries cannot be international poverty fress for individual countries cannot be compared with provery rates for population in the time of the birth.

Life operating of the countries of the standardized indicator individual countries cannot be compared with provery rates for population in the time of the birth.

Life operating of the countries of the standardized indicator individual countries cannot be referred to as a primary adjusted entire of the standardized indicator of the standardized indicator individual countries cannot be referred to as a primary adjusted entire of the countries of the population in the standardized individual countries cannot be referred to as a primary adjusted entire of the countries of the population in the standardized in the standardized whee mother or cannot be referred to a say in the percentage of the total individual countries cannot be referred to a say in the percentage of the total population in the standardized in the standard

seeline used to compare the performance of each country OR if country data is equal to the regional baseline ountry data is better than the regional baseline

country data is worse than the regional baseline

The State of the World's Children 2015 - UNICEF www.unicef.org/publications/files/SOWC 2015 Summary and Tables.pdf

Human Development Report 2013 – United Nations Development Programme

http://hdr.undp.org/en
Acronyms and symbols
— Data not available,
x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.

\* Data refer to the most recent year available during the period specified in the column heading.

\*\*Excheder Chief to the most recent year available during the period specified in the column heading.

\*\* Excludes China.

y Data differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages. Surveys with a superscript footnote of "a" are mainly DHS surveys awaiting re-analysis to add the households that did not have salt to the estimate. Surveys with a superscript footnote of "b" cannot be confirmed in whether the reported value included by the confirmed in whether the reported value included by the confirmed in whether the reported value included by the confirmed in whether the reported value included by the confirmed in whether the reported value included by the confirmed in whether the reported value included by the confirmed in whether the reported value included to the confirmed in whether the reported value included to the confirmed in whether the reported value included to the confirmed in whether the reported value included to the confirmed in whether the reported value included the confirmed in whether the reported value in the confirmed in

households that did not have salt to the estimate. Surveys with a superscript footnote of "b" cannot be confirmed in whether the reported value includes households without salt or not.

j Estimates for Eastern Europe and Central Asia are based on a model fit for all of Europe and Central Asia. The Russian Federation was not included and data were mainly from countries in Eastern Europe and Central Asia.

p Based on small denominators (typically 25–49 unweighted cases). No data based on fewer than 25 unweighted cases are displayed.

S Re-analyzed by adjusting the denominator to include households without salt.

‡ Excludes India.

Crude birth rate – Annual nun	-h	00delie-										Def	nition of th	e indicator	s												lescents (aged 15–19)	definiti	seline used to compar					the regional base		

Eniths by age 18 - Percentage of women aged 20-24 who gave birth before age 18. This standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age of 18. Note that the data are based on the answers of women aged 20-24, whose risk of giving birth before the age of 18 is behind them.

Total fertility rate - Number of children would be born per woman if she lived to the end of her childbearing years and bore children are along age-specific fertility rates.

Adolescent birth rate - Number of children enrolled in primary or secondary school who are of official primary school age, expressed as a percentage of the total number of children of ficial primary school age. Because of the inclusion of primary-school-aged children enrolled in lower secondary school who are of official primary school age, expressed as a percentage of the total number of children of ficial primary school age. Because of the inclusion of primary school age as percentage of the total number of children enrolled in lower secondary school who are of official primary school age, expressed as a percentage of the total number of children enrolled in lower secondary school who are of official primary school age. Because of the inclusion of primary-school-age dividen enrolled in lower secondary school who are of official primary school age, expressed as a percentage of the total number of children enrolled in lower secondary school who are of official primary school age. Because of the inclusion of primary school age as percentage of children enrolled in lower secondary school who are of official primary school age. Evaluate of the survey. In the primary school age as percentage of children enrolled in lower secondary school who are of official primary school age. Evaluate of the survey. A lower of interior enrolled in lower secondary school who are official primary school age. Evaluate of the survey. A lower of filering in a primary school age. Evaluate of the survey. A lower of filering enrolled in

Crude birth rate — Annual number of births per 1,000 population.

Births by ag 18 — Percentage of women aged 20-24 who gave birth before age 18. This standardized indicator from population-based surveys captures levels of fertility among adolescents up to the age 18. Note that the data are based on the answers of women aged 20-24, who gave birth before the age of 18 is behind them.

Total fertility are — Number of children who would be born per woman aff she leved to the end of her childred-learning years and become children and surveys. The numerator of this indicator includes children reported to have a birth certificate, regardless of the inclusion of primary - shool population. Percentage of children more age 5 who were registered at the moment of the survey. The numerator of this indicator includes children reported to have a birth certificate, regardless of the inclusion of primary - shool population in Percentage of children enrolled in primary and patient of the inclusion of primary - shool age and patient of the certificate whose more age 5 who were registered at the moment of the survey. The numerator of this indicator includes children reported to have a birth certificate, regardless of the inclusion of interest of the inclusion of interest of the inclusion of interest o

no rounding: 100-999, rounded to nearest 10, and >1,000, rounded to nearest 10. Adjusted: <1000, rounded to nearest 1; and ≥1,000, rounded to nearest 10. Lifetime risk of maternal death Lifetime risk of maternal death these into account both the probability of becoming print and the probability of dying as a result of that pregnancy, accumulated across a woman's reproductive years. Lifetime risk values have been rounded according to the following scheme: <1000, rounded to nearest 1; and ≥1,000, rounded to nearest 10. Low birthwelgible? Percentage of infrasts weighing less than £2,000 grams at birth.

Sturting - Moderate and severe: Percentage of children aged 0-59 months who are below minus two standard deviations from median height-for-age of the WHO Child Growth Standards.

Population using basic drinking water services - Percentage of the population using an improved drinking water services. Where collection time is not more than 30 minutes for a round trip including queuing (improved sources include: piped water, boreholes or tubewells; protected dug wells; protected springs, rainwater, and packaged or delivered water.

him, goes out without felling him, neglects the children or refuses sexual relations.

Violent discipline – Percentage of children in refuses sexual relations.

Violent discipline – Percentage of children 1–14 years old who experience any violent discipline (psychological againses min and/or physical punishment).

Households consuming salt with iodine – Percentage of households consuming salt with any jodine (>0 ppm).

The State of the World's Children 2015 - UNICEF

Human Development Report 2014 - United Nations Development Programme

Acronyms and symbols
- Data not available,
x Data refer to years or periods other than those specified in the column heading. Such data are not included in the calculation of regional and global averages. Estimates from data years prior to 2000 are not displayed.

\*Data refer to the most recent year available during the period specified in the column heading.

\*\*Excludes China\*\*

\*\* Excludes China.

y Data differ from the standard definition or refer to only part of a country. If they fall within the noted reference period, such data are included in the calculation of regional and global averages. Surveys with a superscript footnote of "a" are mainly DHS surveys awaiting re-analysis to add the households that did not have salt to the estimate. Surveys with a superscript footnote of "b" cannot be confirmed in whether the reported

the notisenous trace into its rave sait or the estimate. Surveys with a superscript control or to calmin be committed in whether the reported value includes households without sail or not.

j Estimates for Eastern Europe and Central Asia are based on a model fit for all of Europe and Central Asia. The Russian Federation was not included and data were mainly from countries in Eastern Europe and Central Asia.

p Based on small denominators (typically 25-49 unweighted cases). No data based on fewer than 25 unweighted cases are displayed.

\$ Re-analyzed, adjusting the denominator to include households without sait.

‡ Excludes India.
